We receive headsets that have been run over by a tug and cables that are cut in the middle or shorted internally with no visible signs of damage. These are considered damaged to the point that they are economically un-repairable. Please use the "NOTES" box below to indicate how we should handle these and if you would like to replace them with new ones. The "Notes" box is also for any other special instructions.

Notes: For special instructions and placing orders for new items.
